THE UNIVERSITY OF CHICAGO
DEPARTMENT OF CHEMISTRY

REPORT OF THE COMMITTEE ON THE
PROGRESS OF CHEMISTRY IN
THE UNITED STATES OF AMERICA

GENERAL STATEMENT

The progress of chemistry in the United States during the past decade has been remarkable. The discovery of the structure of the benzene ring and the elucidation of the mechanism of the catalytic action of the platinum group metals are among the most important achievements of the period.

The discovery of the structure of the benzene ring is one of the most important achievements of the period. It has led to a better understanding of the nature of the chemical bond and to the development of new methods of synthesis.

The elucidation of the mechanism of the catalytic action of the platinum group metals is another important achievement. It has led to a better understanding of the nature of the catalytic process and to the development of new catalysts.

The progress of chemistry in the United States during the past decade has been remarkable. The discovery of the structure of the benzene ring and the elucidation of the mechanism of the catalytic action of the platinum group metals are among the most important achievements of the period.
